

BARACK OBAMA ON THE JOB MARKET

BARACK OBAMA WILL WORK TO CREATE JOBS IN AMERICA

Invest in U.S. Manufacturing

America boasts the highest-skilled manufacturing workforce in the world and advanced manufacturing facilities that have powered economic growth in America for decades. Barack Obama will create an Advanced Manufacturing Fund and double funding for the Manufacturing Extension Partnership to help create additional manufacturing jobs.

Create 5 Million New Green Jobs

Barack Obama will transform the challenge of global climate change into an opportunity to create 5 million new green jobs. He will invest \$150 billion over 10 years into developing and deploying advanced energy technologies, including solar, wind and clean coal. His plan will reduce greenhouse gas emissions, decrease our dependence on foreign oil and create jobs that can't be outsourced.

Fight for Trade that Benefits U.S. Workers, Farmers and Businesses

Obama will fight for a trade policy that opens up foreign markets to support good American jobs. He will use trade agreements to spread improved labor and environmental standards around the world and stand firm against agreements like the Central American Free Trade Agreement (CAFTA) that fail to live up to those important standards.

End Tax Breaks for Companies that Send Jobs Overseas and Support Companies that Create Jobs in America

Obama believes that companies should not get billions of dollars in tax deductions for moving jobs overseas. Instead, he will support companies that create good-paying jobs in the U.S.

Invest in our National Infrastructure

Barack Obama will address the infrastructure challenge by investing \$60 billion over 10 years in a National Infrastructure Reinvestment Bank to expand federal transportation investments. These projects will create up to two million new jobs and stimulate approximately \$35 billion per year in new economic activity.

Support Innovation

Barack Obama believes we need to double federal funding for basic research, expand the deployment of broadband technology, and make the research and development tax credit permanent to keep American companies competitive in the global economy.
